Vigilo

SOLUTIONS

The GPS tracking solution for machinery

Control, security and productivity on every site

20+ years of experience

163,842 connected vehicles

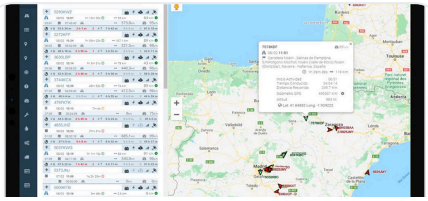

9 countries with our own offices

24/7 support

Service features

- Your machinery, always tracked
- 24-hour access from any computer, tablet or phone with an internet connection
- Reports on every movement made
- Review every route travelled
- Instant alerts on your phone screen
- Create and manage custom points and geofences
- Entry and exit alerts for any custom point or geofence
- Share your machinery's position feature
- European hardware with GNSS technology
- International multi-operator connectivity

From your PC

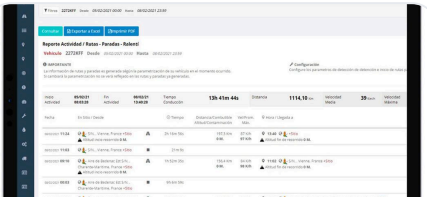

All your vehicles in real time

See all your vehicles in REAL TIME, what status they are in and a summary of everything they have done today.

The most complete reports

Keep track of every parameter of your vehicles in our reporting centre, where you will find all the information you need.

Detailed activity

The most detailed report of every movement your vehicles make: by day, between dates, weekly or monthly, by vehicle or by fleet.

From your phone

See the status of your vehicles in real time, check your activity summary and switch instant on-screen alerts on or off.

Move easily around the map and see all your vehicles in real time, along with the status of each one.

ACCESSORIES

Engine data from your machinery

Real engine hours, fuel consumption and level, RPM and temperature to plan maintenance and prevent fuel theft.

PREVENTIVE MAINTENANCE

Equipment maintenance, based on actual engine hours

Vigilo logs the actual operating hours of every machine and alerts you before each service: oil changes, filters, greasing and scheduled inspections. No handwritten logs and no hour meters to read on the job site.

Alerts by engine hours

Every schedule runs on the actual operating hours logged by the tracker, machine by machine.

Nothing goes overdue

Oil, filters, greasing, hydraulics and scheduled inspections, with alerts before each due date.

Every machine's history

Every job is logged with its date, hours and cost: useful for warranties, rentals and resale.

Fewer breakdowns on site

A part replaced on time won't leave the machine down in the middle of a job.

Planned shop time

Service is done between jobs or on slower days, not when the machine breaks down.

Safer operations

Brakes, hydraulics and safety components checked on time: safer for your operators.

Where you save by keeping maintenance up to date

1. **Cheaper repairs**
   Scheduled service costs less than an emergency repair: parts at regular prices and no knock-on damage to the engine or hydraulics.
2. **No emergency trips**
   No rush trips for a mechanic to the job site and no hauling the machine to the shop.
3. **No idle job sites**
   No rental machines to replace a broken one and no project delays.
4. **Less downtime**
   Operators aren't left waiting around for the machine to run again.
5. **Less fuel**
   Clean filters and fresh oil help keep fuel use under control.
6. **Machines that last longer**
   Less wear and a full record of hours and services that protects resale value.
7. **Manufacturer service up to date**
   Helps you keep up with the service your warranty requires on each machine.

Actual hours

for every machine, no handwritten logs

Maintenance is scheduled on the engine hours logged by the tracker. You see which machines need service now and which can wait.
